

DQ338

CABINET DQ61-IR

DQ338 device has a DQ61-IR inserted in a resin box fit for installation on wall complete with circuit breaker and n°4 PT100 probes with 2m cable.

DQ61-IR is a control and temperature monitoring unit for transformers, easy to use with remarkable functional and aesthetic impact. Capacitive keypad, OLED display with high contrast and customizable frontal, make this device an added value to controlled device. Developed also for electric machines, like motors and electric generator.
